

Emergency Nursing 2022 PI Mash Up

The 2022 annual meeting will showcase performance improvement projects through PI Mash Up. We welcome submissions from around the world that explore and highlight the best in performance improvement from both ENA members and nonmembers.

All those interested in showcasing their project at EN22 must first complete a storyboard through the call for content submission site. Submissions will be peer reviewed and scored for official selection.

We chose to use the storyboard format as it allows audiences to quickly grasp the main points by providing only the most essential information; including one or more easy to understand charts that demonstrate the impact of the effort is highly recommended.

Submitting your proposal

- Review the storyboard example (pages 3-4)
- Follow the storyboard template (on page 2) to simply and clearly communicate your performance improvement project
- Complete the storyboard template and submit your file via the *PI Mashup Storyboard Template Task*
- Complete all other assigned tasks (adding speaker information, etc.)

Next steps

EN22 will have dedicated sessions designed to highlight performance improvement projects (PI Mash Up). All selected storyboards will be offered to session attendees (as an online handout) via the conference mobile app.

Additionally, several submitters will be asked to give a short presentation on their project and participate in a meet and greet. You will be notified if your storyboard is selected for an oral presentation.

Storyboard Template

Project Name

Problem - One sentence on the issue or opportunity being addressed by this PIP

Aim - One sentence on what this PIP aims to achieve

Intervention(s) - Briefly describe what change was introduced to address the problem or opportunity. If there was more than one change, use bullet points to list the multiple interventions.

Measures/Indicators - List what measure(s) or indicator(s) are being used to monitor whether the change is effective.

Results - One to two sentences on the results. Consider including a graph with notes that gives a picture of the impact of the changes over time, or stories that describe the success.

Lessons Learned - Document 1-2 key lessons that were learned through the PIP. From this content our Facilitator will adapt questions and dialogue for the PI Mashup Session during Conference. Please feel free to include both positive and negative lessons.

Next Steps - Performance improvement is a continuous process. In one to two sentences, describe the next steps (e.g., to further refine the intervention; to introduce the change in other parts of the nursing home; to take steps to standardize the change).

Contact Information

Additional notes

We encourage you to include additional information such as:

- pictures or images that help bring the story to life
- the names of the PIP team members
- a description or visual of any quality improvement tools utilized
- specific references from the literature that support the change approach
- you may also include one image of your facility

Example Storyboard

**Sunnyside Nursing Home
Busy City, Massachusetts
November 21, 2012**

Problem: Beginning in April 2011, Sunnyside began to see an increase in pressure ulcers among its high-risk residents; in June 2011, more than 10% of high-risk residents had been diagnosed with a pressure ulcer.

Aim: To reduce the occurrence of pressure ulcers in high-risk residents to less than 5% by November 2012.

Interventions:

- Redesign admissions packet to include the comprehensive pressure ulcer risk assessment form, to be completed within a resident's first 24 hours of admission;
- Require a half day in-service training for all nursing assistants and licensed nursing staff on assessment for pressure ulcer risk and prevention;
- Utilize pressure redistribution mattresses for all residents at high-risk for pressure ulcers.
- Utilize pressure redistribution wheel chair cushions as applicable for all residents at high-risk for pressure ulcers.

Measures:

- Process measure: Number of new residents with completed pressure ulcer risk assessment with 24 hours of admission (Measure Goal: 100% of new residents by March 2012).
- Process measure: Number of residents at high risk for pressure ulcers with pressure redistribution mattresses. (Measure Goal: 100% of residents at high risk for pressure ulcers will have pressure redistribution mattresses by May 2012)
- Process measure: Number of residents at high risk for pressure ulcers and that use a wheel chair, with pressure redistribution wheel chair cushions. (Measure Goal: 100% of high risk residents using wheel chairs will have pressure redistribution cushions for their wheelchairs by May 2012)
- Outcome measure: Percent of high-risk residents with new, nursing home-acquired pressure Ulcers (Measure Goal: Less than 5% by November 2012).

Results: As of April 2012, all new residents at Sunnyside received a comprehensive pressure ulcer risk assessment with 24 hours of admission. 100% of high risk residents have pressure redistribution mattresses. 100% of high risk residents that use a wheel chair have a pressure redistributing wheelchair cushion. The facility experienced a reduction in new pressure ulcers among high-risk residents over the 18-month period, from a high of 12% in August 2011 to a low of 5% in November 2012.

Lessons Learned:

- Although Sunnyside had a policy in place that each new resident should receive a pressure ulcer risk assessment, the admission packets were not set-up to help prompt staff to do so consistently with each admission.
- Nursing staff need more frequent training on pressure ulcer risk assessment and prevention.

Next Steps:

- Continue monitoring to make sure current pressure ulcer rates are maintained or improve.
- Integrate the pressure ulcer assessment tool into the facility’s electronic resident records system.
- Develop a more frequent training program on pressure ulcers for nursing staff.
