The Honorable Darren Soto
U.S. House of Representatives
2353 Rayburn House Office Building
Washington, D.C. 20515

Dear Representatives Bilirakis and Soto,

The Mental Health Liaison Group (MHLG), a coalition of national organizations representing consumers, family members, mental health and addiction providers, advocates and other stakeholders, is writing to express our support for H.R. 1324, the Effective Suicide Screening and Assessment in the Emergency Department Act of 2021, which would help address the growing epidemic of suicides in the United States by improving the identification, assessment and treatment of patients in emergency departments who are at high risk of suicide.

Suicide is the tenth leading cause of death in the United States, having claimed more than 47,000 lives in 2018 alone. Moreover, from 2000 to 2018, the suicide rate in the U.S. increased by an alarming 36 percent, according to the Centers for Disease Control and Prevention. The COVID-19 pandemic will no doubt exacerbate this disturbing trend. In fact, the CDC reported in August that one-quarter of young adults aged 18 to 24 had seriously considered suicide in the previous 30 days.

Emergency departments in our nation's hospitals often provide care for people at-risk for suicide, such as patients with serious mental illness, substance use disorders or chronic pain. Yet, up to 70 percent who leave the emergency department after a suicide attempt never attend their initial outpatient appointment. Further, a 2016 study estimated that suicidal ideation is present in 11 percent of emergency department patients, but only 3 percent are identified by screening.

The Effective Suicide Screening and Assessment in the Emergency Department Act of 2021 takes important steps to assist hospitals to enhance their care for patients at high risk for suicide. This bill would establish a new grant program to assist emergency departments in implementing policies and procedures for the identification, assessment and treatment of individuals at high-risk of suicide, as well as developing best practices for discharge procedures and follow-up care for those patients.

In addition, funding under the program can be used for the hiring of additional behavioral health professionals and to provide better training for emergency health care providers on identifying and treating high-risk patients. Hospitals can also use the grants for telehealth services for the purpose of increasing access to evidence-based treatments.

As organizations leading the fight to improve access to mental health care, MHLG would like to thank you for your leadership on this issue and for introducing this important legislation that enhances the ability of hospitals to identify and treat patients at risk of suicide.

Sincerely,
2020 Mom
